

TRIP REPORT

TO: Tien Nguyen, On-Scene Coordinator
Region VIII EPA

FROM: Glenn Brown, TAT
Region VIII

DATE: June 20, 1995

SUBJECT: D & RGW Railroad

On Thursday, May 11, 1995, Ecology and Environment, Inc., Technical Assistance Team (TAT) member Glenn Brown and U.S. Environmental Protection Agency (EPA) On-Scene Coordinator (OSC) met with representatives of Department of Energy (DOE) geophysical contractor, Rust Geophysical, in Grand Junction, Colorado.

The meeting began at 1000 hours with a discussion about the scope and nature of the D & RGW Railroad site, and the limited capabilities that Rust Geophysical has for executing potential remedial activities at the site. In the afternoon, meeting attendees conducted a visual site assessment to characterize the possibility of lead, PCB, and radiation contamination at the D & RGW Railroad site. A later meeting with DOE and RUST representatives further defined the limits of both DOE and its contractors in relation to site needs. OSC Nguyen defined the parameters of his position and office regarding a possible interagency work agreement but could not commit to agreement specifics without first discussing the issue with his superiors at EPA.

TAT member Brown returned to Denver upon completion of the day's meetings.
